MAL2020 COMPUTING GROUP PROJECT

Group Contribution Group 2

SUPERVISOR: ERIC KONG KOK WAH

EMAIL: eric.kong@peninsulamalaysia.edu.my

NAME	STUDENT ID	COURSE
PAVITHIRA A/P PARAMAKURUBARAN	BSSE2506005	BSSE
NEOH JIA YI	BSSE2506008	BSSE
VARSHINI A/P SEGER	BSSE2506011	BSSE
DHEVESSHWAAR PUNNIA	BSCS2509282	BSCS
THULASI A/P G VIJAYARAJ	BSSE2509287	BSSE

Name : Pavithira A/P Paramakurubaran

Role : Team Leader & Project Developer

Key Tasks:

As the Team Leader and Project Developer, I led the overall development of the Internship Management System (IMS) and coordinated team activities to ensure the project progressed according to plan. I designed the system architecture and database structure to support the platform's functionality. I developed the frontend interfaces using React.js for the student, employer, and admin dashboards, and implemented backend APIs using Node.js to manage system operations. I also integrated the MySQL database to handle internship data, user information, and application records. In addition, I implemented key system features such as internship listings, application management, and profile management. I developed AI-powered components including the resume builder and assessment modules. Throughout the project, I managed the GitHub repository, handled version control, and maintained project documentation. I also conducted system testing and debugging to ensure the system functioned properly before submission, while coordinating communication with the client to ensure all requirements were accurately implemented.

Impact:

My contributions had a significant impact on the successful completion of the project. I ensured that team members completed their tasks according to the planned project timeline and improved overall team collaboration by organizing discussions, assigning tasks, and tracking development progress. My work contributed directly to the development and functionality of the Internship Management System, ensuring that the core features operated effectively. I also facilitated clear communication between the team and the client to ensure the project requirements were fully understood and implemented. Additionally, I supported team members during the development and testing phases by helping resolve technical challenges efficiently.

Collaboration Effect:

Through my role, I helped coordinate team development activities and ensured smooth collaboration among team members. I contributed to the successful

implementation of the system’s core features while maintaining effective communication with both the team and the client to ensure the project objectives were achieved. I also assisted in problem-solving and system testing, which helped the team complete the project within the required timeline.

Name: Varshini A/P Seger

Role: Team Member

Key Task:

Throughout the project, I took on a wide range of responsibilities that spanned both the written report and the visual deliverables. My primary writing contributions were Chapter 2.4 (Legal, Social, Ethical and Professional Issues) and Chapter 3 (Project Management), both of which required extensive research, careful consideration of the system's real world implications, and multiple rounds of refinement to ensure the content was accurate, well structured, and aligned with the project's objectives. Beyond my assigned chapters, I also took the initiative to review and check the entire report, going through each section to identify inconsistencies, inaccuracies, and areas that needed improvement. This ensured that the report as a whole maintained a consistent tone, accurate content, and a professional standard throughout. I was also responsible for compiling and organising Chapter 10 (Appendices), ensuring that all supporting materials and evidence were properly documented and presented in a structured manner. I was also responsible for documenting the meeting minutes during our client meetings, taking notes on all discussions, feedback, and decisions made to ensure that important information was captured accurately and remained accessible to the entire team. In addition to my report contributions, I worked closely together with Jia Yi to design the project poster, developing both the visual layout and the written content to ensure it effectively communicated the key features and outcomes of the IMS in a clear and engaging way. I also collaborated with Jia Yi in preparing the presentation slides, structuring the content and ensuring that the slides accurately represented the system and the team's work in a manner suitable for the final presentation.

Impact:

My contributions had a significant impact on the overall quality and completeness of the final submission. The two chapters I wrote addressed critical aspects of the project, covering the legal, social, ethical, and professional responsibilities of building the IMS, as well as the tools and approach the team used to plan and manage the project effectively. These chapters provided the report with a well rounded perspective that went beyond the technical aspects of the system,

demonstrating the team's awareness of broader responsibilities as computing students. My review of the full report further strengthened the submission by ensuring that errors and inconsistencies were caught and corrected before finalisation. The compilation of Chapter 10 (Appendices) ensured that all supporting evidence and supplementary materials were systematically organised and readily accessible, enhancing the overall completeness and professionalism of the final submission. The meeting minutes I documented during client meetings ensured that all feedback and decisions were properly noted, allowing the team to refer to previous discussions and ensuring that nothing important was overlooked throughout the development process. The poster and presentation slides that Jia Yi and I produced together played a key role in visually representing the project, helping the team communicate their work clearly and confidently during the final presentation.

Collaboration Effect:

My involvement throughout the project extended well beyond my individual assigned tasks, as I consistently took steps to support the quality and continuity of the team's overall output. By reviewing the full report and flagging issues across all chapters, I helped the team avoid potential errors that could have affected the credibility of the submission. The compilation of the appendices ensured that the team had a well organised collection of supporting materials that strengthened the report as a whole. The meeting minutes I documented served as an important reference point for the entire team, ensuring that client feedback was clearly communicated and that all members remained informed of the decisions made during each meeting. My collaboration with Jia Yi on the poster and slides ensured that these deliverables were completed to a high standard and were ready well ahead of the final presentation. Working closely with the team throughout the project, I contributed to maintaining a positive and productive working environment where responsibilities were taken seriously and deadlines were met. My efforts helped ensure that the final submission was not only complete but polished, consistent, and reflective of the team's hard work across the entire project lifecycle.

Name: Neoh Jia Yi

Key Tasks:

Throughout the project, I contributed to both technical development and documentation, covering system design, testing, and team coordination. I was primarily responsible for writing Chapter 3 (Requirements), Chapter 6 (Sprint Planning and Project Scheduling), and Chapter 7 (Software Engineering and System Design), which formed the technical core of the report. These chapters were refined multiple times to ensure accuracy, consistency, and alignment with the implemented system. I also reviewed the full report to eliminate inconsistencies and ensure coherence.

Beyond documentation, I supported system development during user testing by identifying defects and making code adjustments. I contributed to UI/UX design to ensure a consistent and user-friendly interface across all portals and participated in User Acceptance Testing (UAT) and peer testing to validate both functionality and usability. I produced all UML and system diagrams (Class, Sequence, Activity, and State), ensuring they accurately represented the implemented system. I also led the development of the project poster and collaborated with Varshini on the presentation slides to ensure clear and professional communication of the project.

I attended all client meetings and documented detailed meeting minutes, capturing feedback, decisions, and action items. This ensured accurate tracking of client requirements and maintained a reliable reference for the team. Additionally, I took on an informal coordination role, helping align team members, track progress, and ensure deadlines were met. I also consistently reviewed project deliverables to identify errors, inconsistencies, and inaccuracies, ensuring a high level of quality and precision across the team’s work.

Impact:

My work established a strong technical foundation for the report and ensured alignment between documentation and implementation. My involvement in testing and development improved system quality and usability, while my diagrams and

poster enhanced clarity and presentation. The meeting minutes ensured accurate communication with the client and supported effective decision-making.

Collaboration Effect:

I contributed beyond my assigned tasks by supporting team coordination, maintaining alignment, and ensuring consistent communication. My active involvement in meetings, testing, and collaborative deliverables helped the team stay organized, reduce last-minute issues, and produce a cohesive, high-quality final outcome.

Name: Dhevesshwaar Punnia

Role: Team Member

Key Task:

Contributed to the project by supporting documentation and participating in team discussions throughout the development process. Assisted in reviewing content and providing input to improve clarity and consistency. Was also involved in user testing activities, helping to identify issues and provide feedback from a user perspective.

Impact:

Provided support in ensuring that parts of the documentation and system were reviewed and refined. Contributions helped improve the overall quality and consistency of the project deliverables.

Collaboration Effect:

Maintained communication with team members and participated in discussions to stay aligned with project progress. Provided feedback when required and contributed to a cooperative working environment.

Name: Thulasi A/P G Vijayaraj

Role: Team Member

Key Task:

Contributed to the project by assisting in documentation and supporting the preparation of project materials. Participated in team discussions and provided input during the development process. Was also involved in reviewing the system and giving feedback for improvements.

Impact :

Supported the team by contributing to documentation and providing feedback that helped refine the project output. Played a role in ensuring that deliverables were completed with necessary improvements.

Collaboration Effect :

Participated in meetings and team discussions, maintaining communication with team members. Contributed to a collaborative working environment by sharing feedback and supporting overall team progress.
