THULASI A/P G VIJAYARAJ	BSSE2509287	BSSE

Meeting 1

Date: 23 September 2025

Time: 3:00 PM

Venue: Deck 1

Attendees:

- Pavithira A/P Paramakurubaran
- Neoh Jia Yi
- Varshini A/P Seger

Agenda

- Presentation of project idea and objectives
- Discussion of the client's problems and needs
- Collection of client input regarding system features

Discussion

The team introduced the concept of the Internship Management System (IMS) and explained the main objective of the system, which is to streamline and manage the internship process more efficiently. The client shared several difficulties currently faced in managing internship applications, particularly in tracking applications and maintaining effective communication with students and employers.

During the discussion, the client proposed several useful features to improve the system's functionality. These included secure login authentication, an employer portal, and reminder notification functions to ensure important deadlines are not missed. The team also discussed the possibility of integrating artificial intelligence features such as an AI-based resume builder and application management support to enhance the overall system capabilities.

Decisions

- The client agreed with the proposed Internship Management System (IMS) concept.
- The team will prepare a detailed requirement document based on the discussion.
- The client requested to review a draft User Interface (UI) design during the next meeting.

Action Items

- Prepare and design the initial UI prototype for the system.

Meeting 2

Date: 13 October 2025

Time: 10:30 AM

Venue: Deck 1

Attendees:

- Pavithira A/P Paramakurubaran
- Dhevesshwaar Punnia
- Thulasi Vijayaraj
- Neoh Jia Yi
- Varshini A/P Seger

Agenda

- Review feedback from the previous meeting
- Presentation of updated project progress and UI draft
- Discussion of additional client requirements and system improvements
- Confirmation of new system features

Discussion

The team presented the draft User Interface (UI) design for the Internship Management System (IMS). The client reviewed the proposed design and provided constructive feedback regarding layout, usability, and system functionality. Several additional features and improvements were suggested by the client to enhance the effectiveness of the system, including:

- Online submission of internship documents such as Consent Form, Offer Letter, Form B, and Form D.
- Integration of AI-based Resume Builder and AI Assessment features.
- Dashboard enhancements displaying application counts, interview statistics, and internship status updates.
- Calendar integration to manage important deadlines and internship-related events.
- Gmail notification system for reminders and important updates.
- Addition of a LinkedIn profile field to improve student visibility for employers.

- Improved Admin and Employer control panels to facilitate better system management.

The client reaffirmed the importance of secure login authentication, employer portal functionality, and notification features. The potential integration of AI to support resume generation and application evaluation was also discussed further. At the end of the meeting, the client signed the Client Requirement Form that had been prepared based on the previous discussion.

Decisions

- Begin system development and implementation based on the finalized requirements.
- Finalize and document the system requirements specification**.**
- Continue refining the UI and system features based on client feedback.

Action Items

- Update the system design according to the client’s new requirements.
- Begin implementation of the approved system features

Meeting 3

Date: 16 March 2026

Time: 10:00 AM

Venue: Deck 1

Attendees:

- Pavithira A/P Paramakurubaran
- Neoh Jia Yi
- Varshini A/P Seger

Agenda

- Final system demonstration and client review.

Discussion

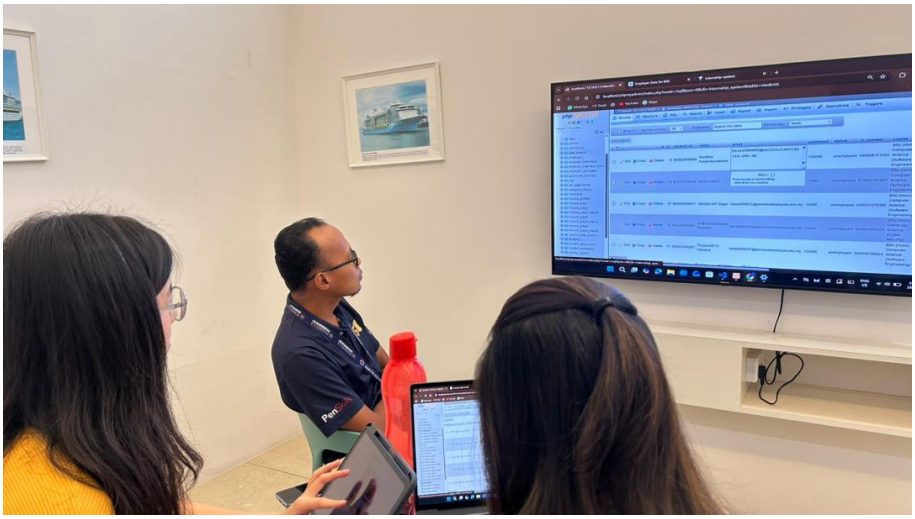
We met with our client and showed him our final system. He was satisfied and mentioned that all the features he suggested have been implemented in the system.

He also added that for future enhancement, we can add an option to upload an offer letter under the interviewing schedule on the employer side of the system.

We also received positive feedback on the UI design, where the client mentioned that the design is very nice and easy to understand.

Action Items

- None. All tasks have been completed, and the system has been approved by the client.



Counselling Room 1

Conclusion

The meetings conducted throughout the project successfully facilitated clear communication between the development team, the client, and the supervisor. During these meetings, the team presented the concept, design, and final implementation of the Internship Management System (IMS). The client provided valuable feedback and suggested several improvements that were incorporated into the system development.

Through continuous discussions and revisions, the system features were refined to better meet the client's needs, including secure login authentication, employer and admin portals, AI-based resume builder features, document submission, dashboard analytics, and notification systems. In the final meeting, the completed system was demonstrated to the client, who confirmed that the implemented features met the proposed requirements and expressed satisfaction with the usability and design of the system.

Therefore, the Internship Management System (IMS) is considered successfully completed and approved by the client. This document is signed as confirmation that the meetings were conducted and the system requirements and final outcome have been acknowledged by all relevant parties.
