UAT Test Plan for Internship Management System

1. Scope

1.1 Objectives and Business Requirements

The objective of this User Acceptance Testing (UAT) is to ensure that the Internship Management System (IMS) meets the required project objectives and functions according to user expectations.

The system aims to:

- Provide internship management features for students, employers, and administrators
- Allow online document submission and tracking
- Support AI-based resume builder and assessment
- Improve communication through notifications and reminders

Success is measured by:

- All main features functioning correctly
- Users able to complete tasks without major issues
- Positive feedback from client during testing

1.2 Scope

This UAT focuses on testing core functionalities of the system including:

- Internship offer management
- Student profile management
- Employer portal
- Admin dashboard
- AI resume builder and assessment
- Notification and email reminder system

Features not included:

- Advanced system performance testing
- External system integrations beyond project scope

2. Testing Team

Name	Role	Responsibility
Pavithira	Team Leader	Coordinate UAT, ensure testing completeness
Jia Yi	Team Member	Prepare test cases and documentation
Varshini	Team Member	Record feedback and results
Client (Mr. Amir Asyari)	End User	Perform acceptance testing

3. Milestones and Deliverables

3.1 Design & Testing Process

The system was developed and prepared before UAT. Testing was conducted after ensuring all main features were implemented.

The testing process includes:

1. System preparation
2. User walkthrough and explanation
3. Feature testing by client
4. Feedback collection

3.2 Staging Environment

Testing was conducted using the developed system environment, which simulates real user interaction.

3.3 Training

Before testing, the client was guided on:

- How to use the system
- Key features and functions
- Expected testing tasks

3.4 UAT Execution

The UAT was conducted by allowing the client to test the system features directly.

Steps:

- Client logs into system
- Client explores features (student, employer, admin)
- Client performs actions such as submitting applications and using AI tools
- Feedback is collected

3.5 Reporting

Feedback from the client was reviewed and minor improvements were made.
Final confirmation was provided through the UAT Acceptance Letter.

4. Environmental Requirements

4.1 Hardware Requirements

- Laptop
- Internet connection

4.2 Software Requirements

- Web browser (Chrome)
- System hosted locally

5. Features to be Tested

Feature 1: Internship Management

Pass: Users can view and apply for internships
Fail: Unable to apply or view listings

Test Case:

1. Login as student
2. View internship listings
3. Apply for internship

Feature 2: AI Resume Builder

Pass: Resume generated successfully
Fail: Resume generation fails or errors occur

Test Case:

1. Access resume builder
2. Enter details
3. Generate resume

Feature 3: Admin Dashboard

Pass: Admin can manage users and data
Fail: Admin unable to perform actions

Feature 4: Notification System

Pass: Notifications and reminders are sent

Fail: No notifications received

Features to Avoid Testing

- Performance under heavy load
- External integrations not implemented

6.Supporting Evidence

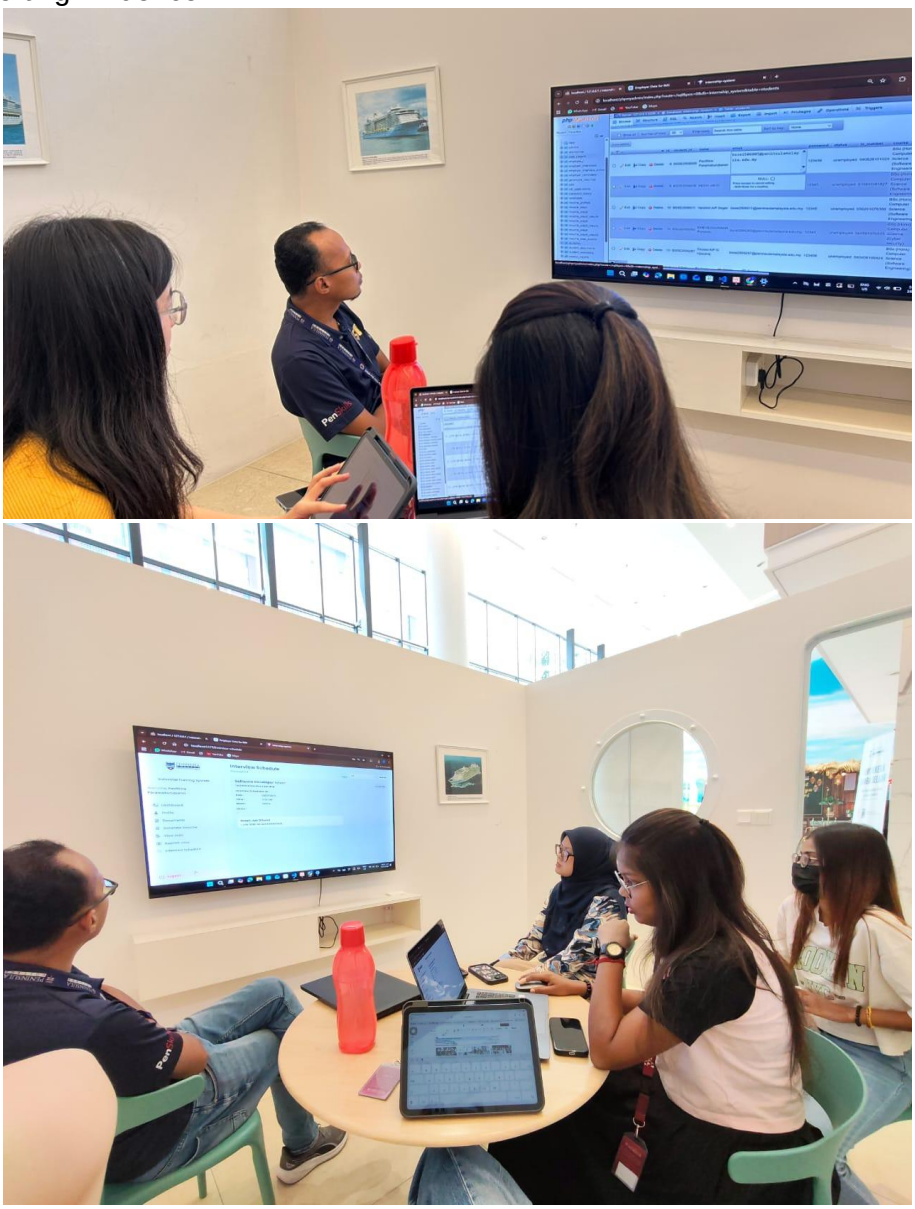

Figure 1: UAT Session with Client

This image shows the UAT session conducted with the client, where system features were demonstrated and tested.

USER ACCEPTANCE TEST (UAT) ACCEPTANCE LETTER

Internship Management System (IMS)

Date: 17/3/2026

To Whom It May Concern,

This letter serves as formal confirmation that the Internship Management System (IMS) developed by the student project team has been reviewed and tested based on the agreed project requirements.

The system was evaluated to ensure that the main requested functionalities were implemented correctly and are working according to expectations. These include, among others:

- Internship offer management
- Online document submission
- Dashboard updates
- Calendar and deadline management
- Reminders and notifications
- AI resume builder
- AI assessment
- Admin control panel
- Employer portal
- Email Reminder Integration
- Separate user login access
- Student profile fields

Based on the User Acceptance Testing conducted, I hereby confirm that the system meets the required project objectives and is **accepted as satisfactory for academic/project submission purposes**.

This acceptance is made with reference to the previously agreed client requirements document signed by the involved parties.

Thank you. Sincerely,

Mr. Amir Asyari

Client

Internship Management System (IMS)
